

Gabriel Silva Gouvêa

São Paulo, Brazil · gabrielsgouvea@hotmail.com · linkedin.com/in/gouveags · github.com/gouveags

Product-minded full-stack software engineer who really likes to solve hard problems. I'm especially interested in making AI solutions that improve people's lives, scaling systems up, shipping fast and creating reliable applications. Outside work, I regularly contribute to open source projects such as PostHog, LangChain/LangGraph and some Linux tooling.

Work Experience

Software Engineer	MOVEdot AI (YC F25)	May 2025 - Present
<i>Agent & data platform</i>	São Paulo / Hybrid	

Small team building AI agents for hardware engineering, used by dozens of professional racing and automotive teams, including Arrow McLaren IndyCar for on-track and post-race analysis.

- Set the technical direction for the production agent platform and owned its first version from scratch. Later, when LangGraph/LangSmith Cloud stopped fitting our deployment, observability and enterprise needs, I proposed and led **Agent Core**, our in-house agentic runtime infrastructure for customer-cloud and hybrid deployments.
- Work from product problem to production: shipped agent related systems for scheduled analyses, high volume KPI tooling manipulation and dynamic AI generated on-demand data dashboards, regularly crossing React, APIs, the agent runtime and infrastructure to get the features into users' hands.
- Raised the reliability bar for agent changes with high volume trace-driven debugging, synthetic-data evals, automated error alerts, sandbox spin up speed improvements and production quality gates; failed runs fell from about 10% to 3% in 30 days.
- Own Agent Core Infra across AWS, Kubernetes, Terraform, PostgreSQL, ClickHouse and Redis; write architecture notes, review changes across the agent platform, and drive fixes through deployment, tracing, state consistency and failure recovery.

Software Engineer	Realms / IP.TV	Jan 2023 - Apr 2025
<i>AI & platform</i>	Rio de Janeiro / Remote	

[EduxGen.AI](#) reports 2M+ pieces of educational content generated for 50K active educators.

- Built EduxGen.AI from zero with a small team of 3, across React, Node and the LLM/media backend, turning one prompt into lessons, slides, handouts, assessments, images and videos. The product won [Tech & Learning Best of 2024](#) and was a [Bett 2025 AI for Teaching & Assessment finalist](#).
- Solely owned the rework of the content-generation backend around a custom agent orchestration framework and a custom WebSocket layer; Architected the solution connecting services with Redis pub/sub and Kafka for data consistency.
- Designed and owned the retrieval and knowledge layer with PostgreSQL/pgvector, reranking and Neo4j. Then simplified its container/build path, cutting the Docker image about 90% and build time about 70%.

Open Source Contributions

[PostHog](#) | **AI observability, SDKs & ingestion**

- Added LangChain v1 middleware to @posthog/ai so agent runs, model calls and tool spans are traced natively; kept LangChain optional and covered real tool loops, privacy, concurrency and failure cases. Merged [#4556](#); Python counterpart [#945](#) is under review.
- Fixed Anthropic and Bedrock token accounting across ingestion and the Python/TypeScript SDKs, including cache-TTL pricing, streaming metadata and backwards-compatible fallbacks. Merged [#71323](#), [#746](#), [#4236](#) and [#74380](#).

[LangChain / LangGraph](#) | **Agent frameworks**

- Corrected AWS credential precedence in ChatAnthropicMantle so explicit SigV4 credentials are not silently overridden by an ambient bearer token (merged [#1230](#)). Also prototyped graph-wide default error handling in LangGraph ([#7757](#)).

[Noctalia / Terra](#) | **Linux desktop**

- Reproduced a Bluetooth crash on physical hardware, traced it to discovery ownership during pairing, and shipped the downstream RPM patch (merged [#16215](#)).

Technologies & Languages

Languages: Proficient in TypeScript/JavaScript, Python, Shell Scripting and SQL. Familiar with Rust, C, C++, C# and Ruby.

Technologies: Node.js, NestJS, FastAPI, PostgreSQL/pgvector, Redis, ClickHouse, SQS, Kafka, WebSockets, SSE, RAG, AWS, Kubernetes, Docker, Terraform, CI/CD, LangSmith, Langfuse, pytest, Jest, Playwright, React, Next.js, Material UI, Tailwind CSS, etc.

Education

-
- **B.Sc. Computer Science**, Estácio. *Expected Sep 2027.*
 - **Electronic & Computer Engineering coursework**, Federal University of Rio de Janeiro (UFRJ), 2018-2024.
